

CURASEPT BIOSMALTO „CARIES, ABRASION & EROSION“ PRODUCT LINE

Created for neutralizing damage caused by teeth wear and erosion – mineralization of enamel and dentin, to create a strong mineral enamel and dentin layer.

250 ppm fluoride

„Caries, Abrasion & Erosion“ mouthwash, for daily use

RDA <56
1450 ppm fluoride

„Caries, Abrasion & Erosion“ toothpaste, for daily use

1450 ppm fluoride

„Caries, Abrasion & Erosion“ strengthening gel

CURASEPT BIOSMALTO „SENSITIVE TEETH“ PRODUCT LINE

For immediate and effective elimination of teeth sensitivity by filling dentinal tubules, for remineralization of enamel and dentin, creation of strong mineral enamel and dentin layer

250 ppm fluoride

„Sensitive Teeth“ mouthwash for daily use

RDA <17
1450 ppm fluoride

„Sensitive Teeth“ toothpaste for daily use

1450 ppm fluoride

„Sensitive Teeth“ strengthening gel

„Sensitive Teeth“ toothbrush

CURASEPT BIOSMALT PROBIOTIC FOOD SUPPLEMENT FOR ORAL CAVITY

This is a food supplement that contains the good *Bacillus coagulans* BC4, the synergy of good bacteria, vitamins B6, B12 and folic acid has a particularly positive effect for the tissues of the oral cavity and for the condition of the teeth. Balances the oral microflora, fights with cariogenic bacteria and reduces their harmful effect on enamel.

A food supplement is not a food substitute. A varied and balanced diet and a healthy lifestyle is important.

CARIES, ABRASION & EROSION PRODUCT LINE FOR CHILDREN

For the remineralization of enamel and dentine, protection against the formation of tartar, for bacterial plaque formation inhibition

1000 ppm fluoride

„BABY-KID“ 6 mos. – 6 yrs.
with fluoride,
strawberry or mint flavor

„BABY-KID“ 6 mos. – 6 yrs.
without fluoride,
strawberry flavor

1450 ppm fluoride

„JUNIOR“ 7 – 12 yrs.
with fluoride,
various fruits flavour

CE – Curasept Biosmalto products (except „Probiotico“ food supplements) are medical devices.
Carefully read the information on the package before use.

CURASEPT[®] BIOSMALTO

TOOTH SENSITIVITY
PROBLEM SOLVING

SOLUTION TO TOOTH DECAY, TOOTH
WEAR AND EROSION PROBLEMS

ENSURED STRENGTH
FOR YOUR TEETH ENAMEL

After 7 years of research conducted in cooperation with prestigious partners, "Curasept" specialists have created a product with an innovative and unique formula, which consists of hydroxyapatite which was improved on the basis of biomimetics and by compounds of other chemical substances:

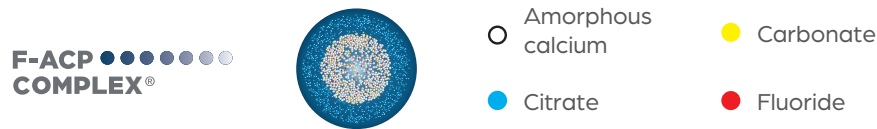

BIO active complex + HAF

Magnesium, carbonate, strontium, chitosan and fluoride compound promotes faster mineralization process, stabilizes the newly formed mineral tissue and prolongs the release and action of components in order to achieve perfect remineralization process of enamel and dentin.

These two formulas, which are ingredients of Curasept Biosmalto products, create a new mineral layer which is stronger, more resistant to acids and decay. In addition, the use of Curasept Biosmalto line products helps to reduce plaque formation process, tooth sensitivity symptoms and prevents erosion.

F-ACP complex

The complex consists of amorphous calcium phosphate, citrate, carbonate and fluoride. Amorphous calcium phosphate is a non-crystalline, fast-reacting material which extremely quickly turns into hydroxyapatite – a natural substance which subsites the functions of dentin and enamel. Citrate coats the surface of the remineralized tooth, stabilizes the F-ACP complex and neutralizes acids produced by dental plaque, thereby protecting the newly formed remineralized layer.

6 mos. – 6 yrs.

Upon contact with saliva, the F-ACP formula immediately dissolves by activating active substances that penetrate through damaged dentin and enamel places up to dentin tubules. In this way, a new mineral layer is formed, which is much more resistant and stronger than ordinary hydroxyapatite. Thanks to this unique formula, the remineralization process not only takes place in the surface layers of the tooth, but also fills demineralized dentin tubules and other deep micro-damages. In this way a long-lasting and effective remineralization effect is achieved.

Curasept Biosmalto CARIES, ABRASION & EROSION product line

This line, characterized by a unique formula, creates a more resistant and extremely strong mineral layer of enamel and dentin in case of symptoms of tooth wear and erosion, when remineralization is required.

The line is designed and balanced for symptoms as:

- Strong risk of caries formation
- Xerostomia – symptoms of dry mouth
- Tooth wear and erosion
- Gastrointestinal reflux
- White spots on the teeth, which often appear under orthodontic appliances during long-term use
- Thinning of teeth enamel and dentin due to pregnancy
- In case of diabetes
- Other problems of teeth enamel and dentin loss, when rapid remineralization is required

Curasept Biosmalto SENSITIVE TEETH product line

Intended for particularly sensitive teeth and gums, when urgent care is needed. The components of the formula (strontium) extremely quickly eliminate teeth sensitivity and stinging sensation.

Due to a unique remineralization process and formulas composed with hydroxyapatite, these products not only reduce the feeling of sensitivity, but also eliminate the cause of it and create a new mineral layer which is much more resistant to acids.

The line is designed and balanced for symptoms as:

- Hypomineralization of enamel – wear of front teeth
- Sensitivity caused by teeth wear and erosion
- Gum recession
- After a root canal treatment procedure
- After teeth whitening or oral hygiene, after removing tartar and plaque
